

278

278 Health Care Services Review — Request for Review and Response — Real-Time

This companion document is for informational purposes only to describe certain aspects and expectations regarding the transaction and is not a complete guide. The details contained in this document are supplemental and should be used in conjunction with the ASC X12 Standards for Electronic Data Interchange Technical Report Type 3 (TR3) as published by the Washington Publishing Company.

Section 1 – 278 Health Care Services Review: Basic Instructions

Section 2 – 278 Health Care Services Review: Enveloping

Section 3 – 278 Health Care Services Review: Charts for Situational Rules

Section 4 – 278 Health Care Services Review: Charts for Response Transactions

NOTE: Availity has been designated to serve as our Electronic Data Interchange (EDI) partner for all electronic data and transactions.

Get Started With Availity*

Use the Availity Companion Guide to connect to the Availity EDI Gateway for your EDI transmissions.

Also, the <u>Availity Quick Start Guide</u> will assist you with any EDI connection questions. If you're a provider and wish to use a Clearinghouse or Billing company, please work with them to ensure connectivity.

Need Assistance?

For questions about signing up, contact Availity Client Services 1-800-AVAILITY (1-800-282-4548) or visit www.availity.com

Release AV-3 (June 2022) 005010X217

^{*} Availity, LLC is an independent company providing administrative support services on behalf of UniCare Health Plan of West Virginia, Inc.

Section 1 - Basic Instructions

1 Business Events Supported

This companion document supports the following health care service review business events:

- Outpatient Service Review
- Inpatient Service Review
- Specialty Care Referral

•

2 Contact for Signup and Support

To start submitting 278 x217 requests, contact Availity at www.availity.com.

3 Business Rules and Limitations

Admissions and discharges should be transmitted to the Payer within 24 hours of admission or discharge to facilitate these use cases.

Inpatient admission reviews submitted more than 5 days after the date of admission will not be accepted.

4 Taxonomy Codes (PRV)

The Healthcare Provider Taxonomy code set divides health care providers into hierarchical groupings by type, classification, and specialization, and assigns a code to each grouping. The Taxonomy consists of two parts: individuals (e.g., physicians) and non-individuals (e.g., ambulatory health care facilities). All codes are 10-alphanumeric positions in length. Health care providers select the taxonomy code(s) that most closely represents their education, license, or certification. If a health care provider has more than one taxonomy code associated with it, please use the taxonomy code most relevant for the service(s) provided.

It is strongly recommended that the taxonomy be populated in PRV segments. Refer to the X12 website for a listing of codes, <u>Provider Taxonomy</u>.

5 Attachment/Supplemental Documentation

When submitting additional documentation to support a request (ex. medical records), the **PWK** segment is available to identify the type of documentation, and unique identification number to correctly match up to the specific request.

The <u>275 Companion Document</u> assists with specific attachment requirements and enables providers to electronically submit attachments based on their business needs.

When attachments are sent electronically (PWK02 = EL) and transmitted in an X12 275, PWK06 is used to identify the attached electronic documentation.

The number in PWK06 of the 278-authorization request is carried in the TRN segment of the 275 attachment transaction.

(1) Sending attachment with initial 278 request

When the provider knows that the payer requires additional information to process the authorization request

- Provider sends additional information when submitting the authorization request
- Provider sends the 278 authorization request with the Loop 2000E PWK segment:
 - PWK02 = EL (electronically only)
 - o PWK05 = AC (Identification Code Qualifier); required if PWK02 = EL
 - PWK06 = Identification Code (Attachment Control #) Unique number assigned
 by the provider or their vendor
- Provider then sends the 275 attachment transaction (TRN02 = Attachment Control #)
- Provider PWK06 Attachment Control # is the key to unsolicited transaction matching
- When the attachment is unsolicited the Attachment Control # = X12 278 PWK06 = X12 275 TRN02

(2) Sending attachment from a payer response

Payer requests additional information from the provider to process an authorization request

- Provider sends an authorization request.
- Payer determines not enough information exists to process the authorization request

Payer sends a 278 response requesting the additional information

- The Certification Action Code (HCR01) will be PEND (A4).
- The Review Decision Reason Code (HCR03) will be "Additional Patient Information required" (0U)
- The response will contain an Additional Service Information (PWK) segment in Loop 2000E or Loop 2100F.
- Specific Logical Observation Identifiers Names and Codes (LOINC) may be requested in the Request for additional information (Loop 2000F HI) segment.

Provider uses the X12 275 to respond to the response request

- Payer Attachment Control # (PWK06) is the key to solicited transaction matching.
- When the attachment is solicited, the Attachment Control # (PWK06) is in both the Payer request and the Provider Attachment response (X12 275 TRN02)
- The Attachment Control # (PWK06) is assigned by payer and returned in the 2000E or 2100F PWK06 response.

6 Diagnosis Information

DX code must be included as ICD-10.

• Do not include the decimal in the X12 278.

7 Facility and Provider Identification

Facilities and providers are identified by name, address, NPI, Tax ID, payer provider ID. In each loop identifying a provider use elements as follows:

- Last Name (NM103)
- First Name, if individual (NM104)
- NPI (NM109, use "XX" qualifier in NM108)
- Tax ID (REF02, use "EI' qualifier in REF01)
- Payer Provider ID (REF02, use "ZH" qualifier in REF01)
- Address in N3 and N4 segments

8 Patient Identification

Patients are identified by Health Care ID (HCID). This identification number generally appears on the patient's insurance ID card. The HCID assigned, however, applies both to the member and to qualified dependents, so it does not uniquely identify covered individuals. The following information must be sent to identify the patient:

- HCID, including member prefix, if present on card (NM109)
- Last Name (NM103)
- First Name, if individual (NM104)
- Date of Birth (DMG02)

HCID is always sent in Subscriber Name Loop 2010C.

If the patient is known to be the primary subscriber, then the patient's name and DOB are also sent in Subscriber Name Loop 2010C. If the patient is known to be a dependent of the subscriber, then Patient Name and DOB are sent in Dependent Name Loop 2010D. If it is unknown whether the patient is the subscriber or a dependent, then either loop may be used.

9 Social Security Number

Unless requested, *do not send the social security number* referenced in the below segments of the TR3:

- Loop 2010A NM108 Utilization Management Organization (UMO) Name
- Loop 2010B NM108 Requester Name
- Loop 2010B REF01 Requester Supplemental Identification
- Loop 2010C REF01 Subscriber Supplemental Identification
- Loop 2010D REF01 Dependent Supplemental Identification
- Loop 2000E PWK01 Additional Patient Information
- Loop 2010EA NM108 Patient Event Provider Name
- Loop 2010EA REF01 Patient Event Provider Supplemental Information
- Loop 2000F PWK01 Additional Service Information
- Loop 2010F NM108 Service Provider Name
- Loop 2010F REF01 Service Provider Supplemental Identification

10 Encounter Identification

Encounter identifier assigned by the facility to uniquely identify the encounter should be sent in the patient's loop 2010C or 2010D in a REF segment with REF01 = 'EJ' (Patient Account Number).

11 Update Case Creation

It is sometimes necessary to modify an authorization after approval.

The authorization case number should be submitted in Previous Review Authorization Number (Loop 2000E REF*BB) and the Certificate Type Code (Loop 2000E UM02) should be "S" (Revised).

Other data elements that may be added/updated in Loop 2000E:

- Additional diagnosis codes in the HI segment (up to 12 total codes)
- A change of services dates in Event Date (DTP*AAH)
- A change of inpatient dates in Admission Date (DTP*435) and/or Discharge Date (DTP*096)

To add a procedure or service line

Additional iterations of the Service line (Loop 2000F) can be submitted. The Certificate Type Code (UM02) should be "I" (Initial") for service lines added in this transaction.

Procedure codes may be submitted in either the SV101 or SV202 elements.

To add additional length of stay

When an inpatient admission is being extended, a new service line (Loop 2000F) will be submitted for each extension. Each extension service line will require 2 segments:

- Service Dates DTP*472
- Health Care Services Delivery HSD

For example, if a patient is already admitted and is having their admission extended by 2 days the following Service Line (Loop 2000F) would be sent:

```
HL*5*4*SS*0~
DTP*472*RD8*20220102-20220104~
HSD*DY*2~
```

12 Special Note about Response Timing When submitting real-time/B2B

• An immediate response will be returned with basic information. Further updates are available through the 278 inquiry process.

When submitting batch mode

- File acknowledgement response files will be returned within a few minutes. A 278 response file will be returned within a few hours. Further updates are available through the 278 inquiry process.
- Note: Responses are made available as they are ready. Transactions submitted as a batch may have responses returned in any order and some responses may be delayed. Please consult with the Availity documentation on how to group your responses.

13 Inpatient Length of Stay

- Date range is submitted in Service Level loop 2000F using segment DTP*472 (Service Date).
- Quantity is submitted in the Service Level Loop 2000F using HSD01 and HDS02 segment (Health Care Service Delivery).

14 Uppercase Letters, Special Characters, and Delimiters

As specified in the TR3, the basic character set includes uppercase letters, digits, space, and other special characters.

- * All alpha characters must be submitted in UPPERCASE letters only.
- * Suggested delimiters for the transaction are assigned as part of the trading partner set up.
- o Data Element Separator, Asterisk (*)
- o Repetition Separator (ISA11), Caret (^)
- o Sub-Element Separator, Colon (:)
- o Segment Terminator, Tilde (~)
- * To avoid syntax errors, hyphens, parentheses and spaces are not recommended to be used in values for identifiers.

Examples: Recommended: Zip Code 123456789 Medical Record # 1234567

* Since originally submitted values may be returned on outbound transactions, Payer encourages trading partners to not use the following special characters as part of the value: asterisk (*), less than/greater than signs (<, >), colon (:), and slash (/). This minimizes the risk for a special character to be recognized as a delimiter.

Example: Provider assigns a Patient Control Number '12*3456789'. Although an asterisk (*) is a valid special character, it adversely affects processing since it is also a common delimiter. The value '12*3456789' may process incorrectly as two separate values '12' and '3456789'.

Section 2 - Enveloping

EDI envelopes control and track communications between you and UniCare Health Plan of West Virginia, Inc. (UniCare). One envelope may contain many transaction sets grouped into the following:

- Interchange Control Header (ISA)
- Functional Group Trailer (GE)

Functional Group Header (GS)

Interchange Control Trailer (IEA)

UniCare has designated Availity to operate and serve as UniCare's EDI Gateway (entry point) as a no-cost option to our Trading Partners. Availity has specific requirements that must be adhered to and should be reviewed in order to ensure transactions are accepted, processed and ultimately delivered to UniCare.

For more information on submitting claims and the required ISA and GS envelope values, review the following topics in the <u>Availity EDI Guide</u>

- · Uploading and downloading EDI files
- Control Segments/Envelopes
- FTP Client Confirmation
- Acknowledgements and Reports

Section 3 - Charts for Situational Rules

Listed below are loops, segments, and data elements required for proper adjudication by UniCare per the situational rules in the 278 TR3.

Page Break

Section 4 - Charts for Response Transactions

Case Status

Each 278 response will return a current case status. Case status will either be reporting with a Loop 2000E HCR segment or a AAA segment in

Case Numbers

When approved (partially or fully), the authorization number will be returned in the Review Identification Number (HCR02).

Requesting Supporting Documentation

On a PENDED (HCR01=A4) response, supporting documentation may be required to allow processing of the request. Details on the type of documentation being requested will be send in either a:

- PWK segment using the PWK01 to specify the report type
- HI segment using a LOINC to specify the requested document type

Rejections

When a case or service line is rejected (as opposed to denied), an AAA segment will be returned in the loop that triggered the error. The error codes available in the Reject Reason Code (AAA03) are often too generic to be actionable by a submitter. To assist in error identification and correction, a MSG segment will be populated in either Loop 2000E or Loop 2000F with the Payer Error code and description.

Please refer to the text in the MSG segment for guidance on correcting and resubmitting the transaction.
